

Information Systems and Databases

Report 3rd Project Assignment

Health care center database

29/11/2017

1st Semester – 2017/2018

Professors: Mário Gaspar da Silva
Francisco Regateiro
Miguel Amaral

Group number 49:

81731 – Catarina Aleixo
81138 – João Ramiro
81567 – José Miragaia

I. Introduction

This project consists in a Web-based application to perform some tasks that deal with the database that was populated in the 2nd assignment.

In order to unify the four tasks that will be explained in the following sections, it was created a home page (homepage.php) that has all the possibilities that users have to interact with the health care centre, that is represented in Figure 1.

It was created a php file that contains only the code for connecting to the database, to avoid repeating it in all files, that is called connectDB.php.

- [connectDB.php:](#)

```
<html>
  <body>
    <?php
      $host = "db.tecnico.ulisboa.pt";
      $user = "ist181731";
      $pass = "ahcu2726";
      $dsn = "mysql:host=$host;dbname=$user";
      try
      {
          $connection = new PDO($dsn, $user, $pass);
      }
      catch(PDOException $exception)
      {
          echo("<p> Error: ");
          echo($exception->getMessage());
          echo("</p>");
          exit();
      }
    ?>
  </body>
</html>
```

- [homePage.php:](#)

```
<html>
  <body>
    <h1><strong><font color= '#66CC00'>Welcome to the Healthcare Centre</font></strong></h1>
    <hr/>
    <form action="getPatient.php" method="post">
      <p>Search for/Insert a patient: <input type="submit" value="Search"/></p>
    </form>
    <form action="newStudy.php" method="post">
      <p>Create a study: <input type="submit" value="New Study"/></p>
    </form>
    <form action="getRegion.php" method="post">
      <p>Add a region to an element: <input type="submit" value="New Region"/></p>
    </form>
  </body>
</html>
```

Figure 1 – Home Page

II. Check patient existence

The first task consists of searching for a patient, given the full name or a portion of it. If the patient doesn't exist, then the user can register a new patient, giving the patient name, birthday and address.

The page to search for a patient will be displayed when the user clicks on the search button in the home page. The next page it's the `getPatient.php` that has a form that asks for the name the user wants to look for, as it can be seen in Figure 2.

- [getPatient.php:](#)

```
<html>
  <body>
    <h3><strong><font color= '#66CC00'>Search for a Patient</font></strong></h3>
    <hr/>
    <form action="checkExistance.php" method="post">
      <p>Patient Name:
        <input type="text" name="name" require/>
        <input type="submit" value="Search"/>
      </p>
    </form>
    <?php
      echo("<p> Turn to the <a href='\"homePage.php\"'>home page</a>")
    ?>
  </body>
</html>
```

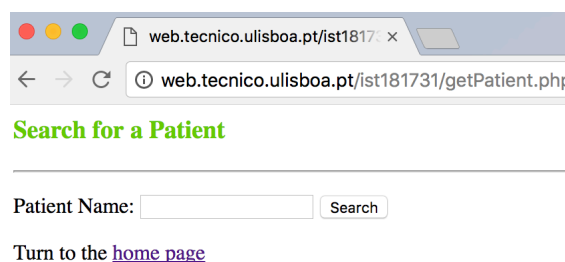

Figure 2 – Search for a patient

As soon as the user presses the Search button, then the `checkExistance.php` is executed. In this file, with the portion of the name given, it will be performed a query to search for all the patients that have names that match with the given substring and it is presented a table with all the results and a possibility of registering a new patient. Either if it returns a patient or not, it was chosen to give that possibility of registering a new patient as it can be seen in Figure 3.

- [checkExistance.php:](#)

```
<html>
  <body>
    <h3><strong><font color= '#66CC00'>Check Patient Existence</font></strong></h3>
    <hr/>
    <?php
      if(($_REQUEST['name']))
      {
        require 'connectDB.php';    /* Connect to database */

        $name = $_REQUEST['name']; /* Get the portion of name that was searched */
        $findName = "%" . $name . "%";
        /* Prepare query to search for patients that have a name with that substring */
        $stmt = $connection->prepare("SELECT * FROM Patient WHERE name LIKE :findName");
```

```

$stmt->bindParam(':findName', $findName);
$stmt->execute();

if($stmt == FALSE)
{
    $info = $connection->errorInfo();
    echo("<p>Error: {$info[2]}</p>");
    exit();
}

$nrows= $stmt->rowCount();
/* If records were found */
if($nrows > 0)
{
    echo("<table border=\"0\" cellspacing=\"5\" bordercolor='#66CC00'>");
    echo("<tr><td bgcolor='#66CC00'><font color='FFFFFF'>Patient Number</font></td><td bgcolor='#66CC00'><font color='FFFFFF'>Patient Name</font></td><td bgcolor='#66CC00'><font color='FFFFFF'>Birthday</font></td><td bgcolor='#66CC00'><font color='FFFFFF'>Address</font></td></tr>");

    foreach($stmt as $row)
    {
        echo("<tr><td>");
        echo("{ $row['patient_number']}");
        echo("</td><td>");
        echo("<a href=\"getDevices.php?patient_number={$patient_number}({ $row['name']})\">");
        echo("</td><td>");
        echo("{ $row['patient_number']}");
        echo("</td><td>");
        echo("{ $row['patient_number']}");
        echo("</td></tr>");
    }
    echo("</table>");
}
else
{
    echo("<p>Patient not found!</p>");
}
/* Possibility of registering a new patient */
?>
<form action="getNewPatient.php" method="post">
<p><input type="submit" value="Register a New Patient"/></p>
</form>
<?php
    echo("<p>Turn to the <a href=\"getPatient.php\">previous page</a></p>");
    $connection = null;
}
else
{
    echo("<p>No patient was searched</p>");
    echo("<p><a href=\"getPatient.php\">Search for a patient</a></p>");
}

?>
</body>
</html>

```

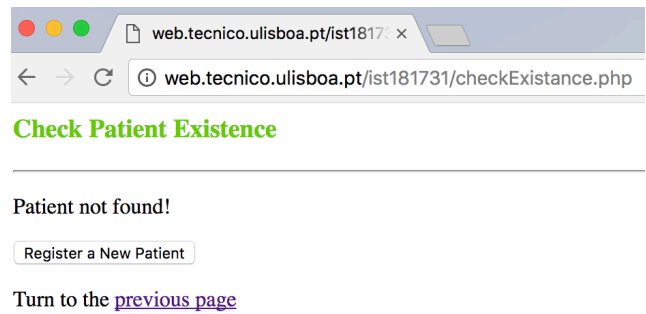

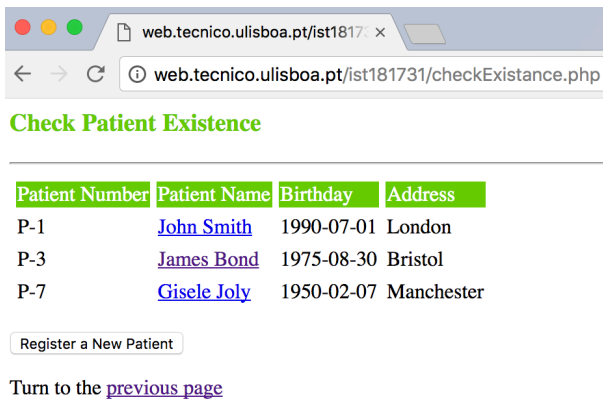

Figure 3 – Display records that contain the substring searched

To register a new patient, as well as making another search pressing the link to return to the previous page. In the first case, it will be displayed a web page that contains a form (getNewPatient.php) with three fields: the name of the new patient, birthday and address as represented in Figure 4.

- [getNewPatient.php:](#)

```
<html>
  <body>
    <h3><strong><font color= '#66CC00'>Register New Patient</font></strong></h3>
    <hr/>
    <form action="insertPatient.php" method="post">
      <p>Name: <input type="text" name="newName" required/></p>
      <p>Birthday: <input type="text" name="newBirthday" required/></p>
      <p>Address: <input type="text" name="newAddress" required/></p>
      <p><input type="submit" value="Register"/></p>
    </form>
  </body>
</html>
```

Figure 4 – Register a new patient

When the register button it's pressed, then it will be displayed a web page that confirms the registration (Figure 5). The changes in the database are performed in a file called insertPatient.php.

- [insertPatient.php:](#)

```
<html>
  <body>
    <h3><strong><font color= '#66CC00'>Confirm Registration</font></strong></h3>
    <hr/>
    <?php

      if(isset($_REQUEST['newName']) && isset($_REQUEST['newBirthday']) && isset($_REQUEST['newAddress']))
```

```

{
    if($_REQUEST['newBirthday'] > date("Y-m-d"))
    {
        echo("<p>Please enter a valid birthday date</p>");
        echo("<p>Turn to the <a href='\"getNewPatient.php\">previous page</a></p>");
        exit();
    }

    require 'connectDB.php';

    $sql = "SELECT patient_number FROM Patient";
    $result = $connection->query($sql);

    if($result == FALSE)
    {
        $info = $connection->errorInfo();
        echo("<p>Error: {$info[2]}</p>");
        exit();
    }

    /* Assign the next number, of the last one that exists, to the new patient */
    $patient_number = "P-" . (($result->rowCount()+1);

    $name = $_REQUEST['newName'];
    $birthday = $_REQUEST['newBirthday'];
    $address = $_REQUEST['newAddress'];

    /* Prepare against SQL injection */
    $stmt = $connection->prepare("INSERT INTO Patient VALUES (:patient_number, :name, :birthday, :address)");
    $stmt->bindParam(':patient_number', $patient_number);
    $stmt->bindParam(':name', $name);
    $stmt->bindParam(':birthday', $birthday);
    $stmt->bindParam(':address', $address);
    $stmt->execute();

    if($stmt == FALSE)
    {
        $info = $connection->errorInfo();
        echo("<p>Error: {$info[2]}</p>");
        exit();
    }

    echo("<p>Patient registered!</p>");
    echo("<p>Turn to the <a href='\"homePage.php\">Home page</a></p>");
}
else
{
    echo("<p>No patient was searched</p>");
    echo("<p><a href='\"getPatient.php\">Search for a patient</a></p>");
}
$connection = null;
?>
</body>
</html>

```

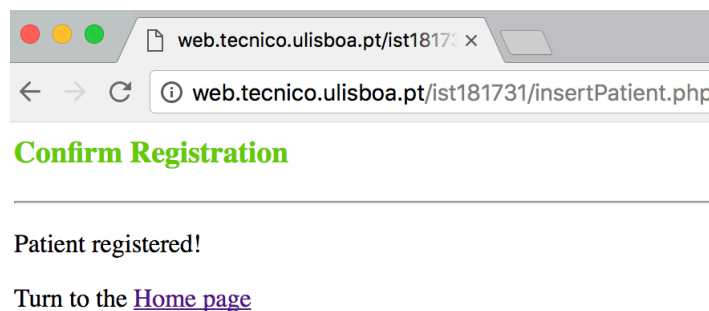

Figure 5 – Confirm registration

III. Replace Devices

When the user searches for a certain patient, the result table has a link in the field name. That link (represented in Figure 3) goes to another web page (getDevices.php) that shows not only the devices currently attached to that patient, but also the ones that the patient wore, since the patient was registered in the health care centre, as it can be seen in Figure 6.

- [getDevices.php:](#)

```
<?php session_start(); ?>
<html>
  <body>
    <h3><strong><font color= '#66CC00'>Devices</font></strong></h3>
    <hr/>
    <?php
      if(isset($_GET['patient_number']))
      {
        require 'connectDB.php';
        $patient_number = $_GET['patient_number'];
        $findName = $_GET['findName'];
        $_SESSION['patient_number'] = $patient_number;

        $stmt = $connection->prepare("SELECT * FROM Wears WHERE patient_number=:patient_number ORDER BY end_date DESC");
        $stmt->bindParam(':patient_number', $patient_number);
        $stmt->execute();

        if($stmt == FALSE)
        {
          $info = $connection->errorInfo();
          echo("<p>Error: {$info[2]}</p>");
          exit();
        }

        $nrows= $stmt->rowCount();
        if($nrows > 0)
        {
          echo("<table border=\"0\" cellspacing=\"5\" bordercolor='#66CC00'>");
          echo("<tr><td bgcolor='#66CC00'><font color= 'FFFFFF'>Serial Number</font></td><td bgcolor='#66CC00'><font color= 'FFFFFF'>Manufacturer</font></td><td bgcolor='#66CC00'><font color= 'FFFFFF'>Start Date</font></td><td bgcolor='#66CC00'><font color= 'FFFFFF'>End Date</font></td></tr>");

          foreach($stmt as $row)
          {
            if($row['end_date'] >= date("Y-m-d H:i:s"))
            {
              echo("<tr><td><strong>");
              echo($row['serialnum']);
              echo("</strong></td><td><strong>");
              echo($row['manufacturer']);
              echo("</strong></td><td><strong>");
              echo($row['start_date']);
              echo("</strong></td><td><strong>");
              echo($row['end_date']);
              echo("</strong></td><td>");
            }
          }
        }
      }
    </?php>
  </body>
</html>
```

```

        echo("<form action=\"replaceDevices.php\" method=\"get\">");
        echo("<input type=\"hidden\" name=\"serialnum\" value=\"{$row['serialnum']}\"/>");
        echo("<input type=\"hidden\" name=\"manufacturer\" value=\"{$row['manufacturer']}\"/>");
        echo("<input type=\"hidden\" name=\"start_date\" value=\"{$row['start_date']}\"/>");
        echo("<input type=\"hidden\" name=\"end_date\" value=\"{$row['end_date']}\"/>");
        echo("<input type=\"submit\" value=\"Replace\"/>");
        echo("</form>");
        echo("</td></tr>");
    }
    else
    {
        echo("<tr><td>");
        echo($row['serialnum']);
        echo("</td><td>");
        echo($row['manufacturer']);
        echo("</td><td>");
        echo($row['start_date']);
        echo("</td><td>");
        echo($row['end_date']);
        echo("</td></tr>");
    }
}

echo("</table>");
echo("<p>Turn to the <a href=\"checkExistence.php?findName=$findName\">previous page</a></p>");
}
else
{
    echo("<p>Patient never wore any device!</p>");
    echo("<p>Turn to the <a href=\"checkExistence.php?findName=$findName\">previous page</a></p>");
}
}
else
{
    echo("<p>No patient was searched</p>");
    echo("<p><a href=\"getPatient.php\">Search for a patient</a></p>");
}
}
$connection = null;
?>
</body>
</html>

```

Serial Number	Manufacturer	Start Date	End Date	
A1	AirSense	2016-01-02 10:08:00	2030-12-31 00:00:00	Replace
H2	Honeywell	2017-07-31 00:00:00	2030-12-31 00:00:00	Replace

Figure 6 – Devices currently attached to a patient

Each device the patient is currently wearing has the possibility of being changed by another one of the same manufacturer that is available (replaceDevices.php). The replacement is done by selecting one of the possible devices that are in a drop-down list and by pushing a button called Replace, as represented in Figure 7.

- [replaceDevices.php:](#)

```
<?php session_start(); ?>
<html>
  <body>

    echo("<p><a href='\"getPatient.php\"'>Search for a patient</a></p>");
}

$connection = null;

?>

</form>
</body>
</html>

```

Figure 7 – Devices available to replace

In the insertReplace.php file the first thing that has to be done is checking if the both new periods already exist in table Period. In order to clarify which periods have to be inserted, let's consider two devices A and B, in which A is being replaced by device B. So, the first period that has to be checked is the period that is going to be used to update the record about device A in table Wears. If the replace is being done today, the period is [start_date of device A, today]. The other period is the one that it's needed to insert the new record in table Wears about device B that is [today, end_date of device A]. If the periods don't exist, then they will be inserted.

After that, it will be inserted a new record and updated another one in table Wears, which corresponds to updating record A with the new period [start_date of device A, today] and inserting a new record for device B with period [today, end_date of device A]. If the update was a success ~~any error occurs~~, then a message with a confirmation of the replacement it will be displayed (Figure 8).

</html>

```

The screenshot shows a web browser window with the address bar displaying 'web.tecnico.ulisboa.pt/ist181731/newStudy.php'. The page title is 'New Study'. The form contains the following elements:

- Patient Number: A dropdown menu showing 'P-1 | John Smith'.
- Request Number: A text input field containing '22'.
- Description: A text input field containing 'X-ray both feet'.
- Study Date: A text input field containing '2017-11-07'.
- Doctor: A dropdown menu showing 'D-107'.
- Device: A dropdown menu showing 'I6 | Iberdata'.
- An 'Add New Study' button.
- A link 'Turn to the Home page'.

Figure 9 – Add a new study

When the study is created, it's also created a series (insertStudy.php). First, it's verified if the request number already exists in the database, once it has to exist before creating a study. Then, it's performed a query to check what was the doctor that made the request, once the doctor who made the request can't performed the study. After that, the new study is introduced in the database. Before committing the data, some verifications are done such as, checking if: (i) the date of the request precedes the study date; (ii) the request number exists; (iii) the doctor chosen to perform the study isn't the same that made the request; (iv) the patient of the request is the same as the patient of the study.

These tasks are performed in a single transaction. If some of the errors occur, then it's called the `rollback()` function. Otherwise, the changes will be committed. As it can be seen from Figure 10, in both cases a message will be displayed, in the first case Study not created, otherwise Study created.

Figure 10 – Study created

If the study wasn't created, it could be one of the four reasons described above:

(i) The date of the request has to precede the study date (Figure 11)

The screenshot shows the 'New Study' form. The form includes the following fields and values:

- Patient Number: P-2 | Roger Smith
- Request Number: 2
- Description: X-ray right hand
- Study Date: 2017-06-05
- Doctor: D-105
- Device: B4 | Bosch

At the bottom of the form is a button labeled 'Add New Study'.

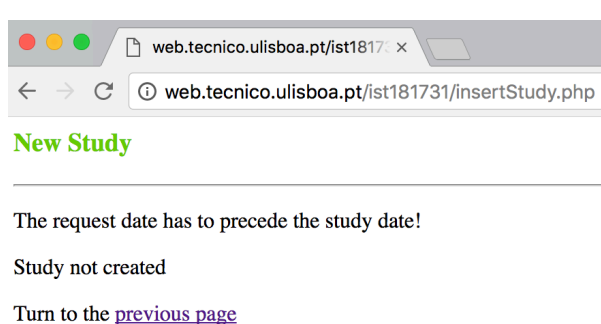

Figure 11 – Error (i), request date has to precede the study date

(ii) The request number doesn't exist (Figure 12)

New Study

Patient Number: P-3 | James Bond

Request Number: 30

Description: X-ray right hand

Study Date: 2017-11-07

Doctor: D-108

Device: M1 | Medtronic

V. Add new region

The last task to perform is to add a new region to a certain element of a series (getRegion.php). To do that, the user has to fill a form, as represented in Figure 15.

- [getRegion.php](#):

```
<html>
  <body>
    <h3><strong><font color= '#66CC00'>Add New Region</font></strong></h3>
    <hr/>
    <form action="newRegion.php" method="post">
      <p>Series ID: <input type="text" name="series_id" required/></p>
      <p>Element Index: <input type="text" name="elem_index" required/></p>
      <p>X1: <input type="text" name="x1" required/></p>
      <p>Y1: <input type="text" name="y1" required/></p>
      <p>X2: <input type="text" name="x2" required/></p>
      <p>Y2: <input type="text" name="y2" required/></p>
      <?php
        echo("<p><strong>Note:</strong> x2 and y2 have to be greater or equal than x1 and y1, respectively</p>");
      ?>
      <p><input type="submit" value="Add Region"/></p>
    </form>
    <?php
      echo("<p> Turn to the <a href='\"homePage.php\"'>home page</a>");
    ?>
  </body>
</html>
```

The screenshot shows a web browser window with the address bar displaying 'web.tecnico.ulisboa.pt/ist181731/getRegion.php'. The page title is 'Add New Region'. The form contains the following elements:

- Series ID:
- Element Index:
- X1:
- Y1:
- X2:
- Y2:
- Note: x2 and y2 have to be greater or equal than x1 and y1, respectively
- Add Region button
- Turn to the [home page](#)

Figure 15 – Form to add a new region

The new record is added to the table Region in newRegion.php file. After inserting that new record in the database, it has to be done a verification that needs the last study of the patient (if there was one). If the description of the last study was the same and this new region doesn't overlap with any region of any element of the last study, then it will be displayed a message that warns to a new clinical evidence for that patient (Figure 16). Otherwise, the region is inserted without warning (Figure 17). Before executing the commit, some validations must be done, such as: (i) check if the series exists and (ii) check if x1 and y1 are equal or greater than x2 and y2, respectively.

- [newRegion.php:](#)

Figure 17 – New region added without new evidence

If the new region wasn't added, it could be one of the two reasons described above:

(i) Series doesn't exist (Figure 18)
